Your outfit.
A roast.
A better idea.

Point the camera. Ask for a roast.
Then ask how to make the outfit better.

"Hey Gemma, roast my outfit."

Gemma 4 E2B + LiteRT-LM. Everything on the phone.

Real app screenshot - earlier development build

The mirror talks back.

ACTUAL GEMMA OUTPUT / SAVED OUTFIT REPLAY

This ensemble screams 'I just woke up like this' with a palette that suggests a failed attempt at coordinated effort.

The blue and orange jacket looks like it was designed by a committee that couldn't agree on a primary color.

That white shirt is clearly trying too hard to be the neutral anchor in this aggressively colored disaster.

Then: "How would you make it better?"

Styling advice uses the same original outfit photo.

Selected, unedited model output. Screenshot and response are separate captures of the same outfit.

BUILT TO RUN OFFLINE

See + hear

CameraX photo + foreground microphone.

Reason on the Pixel

Gemma images, audio and text via LiteRT-LM.

Speak + follow up

Offline Android TTS; original-photo context.

Keep it local

No Internet permission. No cloud inference.

WORKING DRAFT

Camera-to-roast and styling follow-up verified. Buttons support the demo; live wake recognition and garment accuracy still need tuning.
